EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael J. Keenan on April 28, 2006.

The application has been amended as follows:

Claim 1 has been rewritten as follows:

-- 1. (Amended) A [thermal isolation device for a] gas turbine combustor assembly comprising a thermal isolation device having a plurality of substantially flat plates secured in spaced relationship [by] to a plurality of columns, at least one column incorporating a bolt hole, and a bolt extending through the bolt hole and [for use in] securing the device between a pair of combustor components.--

In line 1 of each of claims 2-9 "thermal isolation device" has been deleted and -- assembly-- has been inserted therefore.

Claim 10 has been rewritten as follow:

-- 10. (Amended) A thermal isolation device for a gas turbine combustor assembly comprising at least three discrete substantially flat and substantially triangular-shaped

Art Unit: 3746

plates secured in spaced, substantially parallel relationship to at least three columns, that pass through said plates, each column formed with a through hole adapted to receive a bolt.--

In claim 14 line 2 after "incorporates" "bolt holes" has been deleted and --a bolt holes-- has been inserted therefore.

The following is an examiner's statement of reasons for allowance: the prior art neither discloses nor makes obvious a thermal isolation device for a gas turbine combustor having a plurality of substantially flat plates secured to a plurality of columns wherein either at least one of the columns incorporates a bolt hole and has a bolt extending therethrough for securing the device between combustor components or wherein the plates are substantially triangular and there are at least three columns each formed with a through hole adapted to receive a bolt.

Duckwall (USPN 2,690,462) represents the closest prior art, however the outer plate (23) of Duckwall is not substantially flat, two of the columns (bolts 6 and 7) are solid and the third column does not have a bolt extending therethrough.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
